

AgileBA[®]

Foundation & Practitioner

Master the role of Agile Business Analyst with AgileBA training and certification

Duration: 4 Days

Developed by APMG in partnership with the DSDM Consortium, AgileBA is a new guidance, training and certification scheme designed for business analysts working in an agile environment.

The Business Analyst is a critical role within an agile project team and with more and more organizations adopting agile approaches, we need to ensure those performing this crucial role have the necessary skills and expertise.

The AgileBA syllabus and exams are based on the AgileBA Handbook (published by DSDM). The Handbook offers the first comprehensive set of guidance, framework and practices for the business analyst working on an agile project.

Training and certification has been designed to give the Business Analyst the skills needed to successfully gather, analyse, validate and champion the requirements throughout an Agile project. It also gives context to the Agile Business Analyst role beyond the individual project, in relation to organizational mission and strategy, providing additional depth and guidance for business analysis in an agile context.

AgileBA guidance and training will help individuals and organisations:-

- Lay the foundations for successful agile projects

- Explain how the business analyst role and skills fit in an Agile environment
- Clarify the different ways of working with the Agile BA during the phases of an Agile project
- Outlines the lifecycle of an Agile requirement and how to write good, effective Agile requirements
- Provide a comprehensive set of techniques and practices for effective business analysis and collaborative agile working.

Who Should Attend

AgileBA guidance, training and certification are designed to benefit a wide range of roles including:

- Business Analysts
- Change Analysts
- Project Managers
- Scrum Product Owners/Managers
- Systems Analysts
- Agile Developers.

Learning Outcomes

This certification provides business analysts involved in Agile projects, large and small, with the tools they need to adopt an agile approach. It gives advice on focus and value-delivery and guidance on working with business stakeholders, developers, testers and outlines the skills needed to deliver solutions incrementally.

It equips the business analyst with techniques to incorporate Agile approaches into a programme and to align change with organisational objectives.

Individuals will gain:-

- Knowledge and understanding of AgileBA
- Agile Business Analysis techniques
- How to move from traditional to more agile ways of working

Course Contents

1. The role of business analyst in an agile world
2. Agile fundamentals and the agile BA
3. The agile business case
